

THE DIGITAL PRINTING EXPERT

ABOUT US

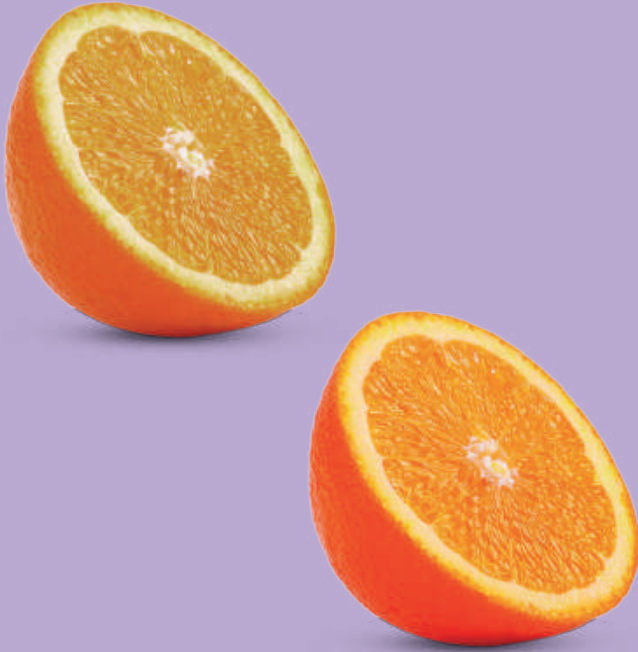

J Point Plus is a Bulgarian printing house for digital printing, offset printing and added services. It was founded in 2006 as part of J Point Group.

J Point Plus produces a wide range of commercial print applications for business and individual clients. The in-house equipment includes the latest technologies for digital and offset printing, liquid metal printing, digital UV varnishing, lasercutting, engraving, laminating, embossing, die-cutting, creasing, and other finishing services.

GLOW 22

DIGITAL PRINTING

We offer 8-color digital printing (CMYK + Orange, Violet, Pink and White) for a better color performance.

OFFSET PRINTING

We offer offset printing in CMYK and Pantone® for increased color rendering.

ADDED SERVICES

We offer plenty of added services for finished products such as creasing, cutting, folding, stitching, thermal binding, and caps mounting.

V-CUT

The machine cuts edges at a 45 degree angle so they can form a perfect sharp edge. That way we can create complex boxes with lids from a single piece of material.

LIQUID METAL FOILS

Liquid metal printing delivers unmatched foil capabilities, including high gloss, and a variety of densities for short to medium runs, using a highly advanced, highly efficient digital process.

CATALOGUES

We can significantly improve and diversify the overall appearance of the catalogue - thanks to our modern printing technologies we can apply digital UV varnish and liquid metal printing with different foils, laser cutting, engraving and perforation with digiCut, perform die cutting, hot stamping, embossing, lamination with matte, gloss and velvet laminates, and other special post-print effects.

PAPER BAGS

CALENDARS

We offer printing and production of business calendars. Most multi-page wall calendars are made with a spiral and a hook, matte or glossy paper and textured or embossed cardboards. Calendars can be further refined with liquid gold printing with colored foils, laser cutting and engraving, embossing, UV varnishing, laminating with glossy, velvet or metallic foil and other special effects.

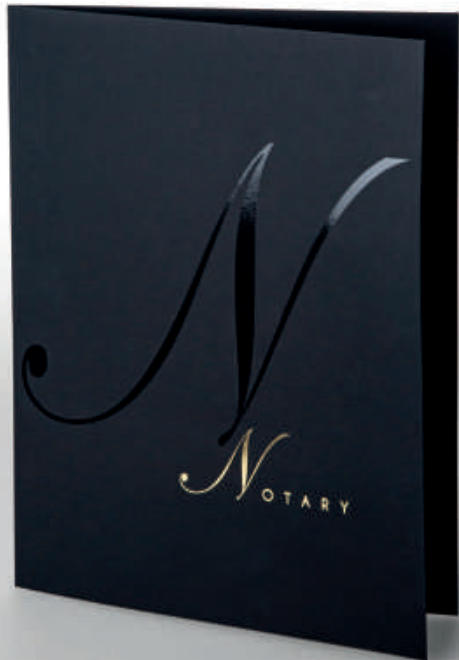

NOTEBOOKS

We offer printing and manufacturing of notebooks with a huge variety of shapes, special effects and materials. The most common are notebooks with cardboard or foamboard backing. Custom solutions are an embossed cover, leather cover, cover with thermoresponsive canvas, and others. The closing of the notebooks can be single or double, as the grip is provided by the elastic or fastening magnet.

MENUS

We offer a variety of materials and die cut options for manufacturing creative menus suitable for restaurants, night clubs, and hotels. Menus can be booklet type, leaflet type, menus with hardcover, standard menus with staples or spiral, list menus, menus with decorative caps, cords, rings or other more flexible solutions.

SCRATCH CARDS & VOUCHERS

We produce vouchers and scratch cards with a variety of sizes, shapes, folds and other special effects. The coating material we use for scratch cards is thick and does not allow content underneath to be visible while users erase it with a coin. The foil can be in silver or golden color.

FLYERS

Flyers are one of the most popular promotional materials as they are suitable for distribution on the street, in restaurants, as well as mailing campaigns. With our print capabilities we can stimulate your clients' imagination with flyers cut in irregular shapes and made of embossed papers.

INVITATIONS

BOOKS

COASTERS

Coasters have always been a practical promotional material that remains longer in the consumer's possession due to its durability and usability. We can produce coasters made of different cardboards, rubber or PVC which makes them heat and moisture resistant without losing color brightness.

"ENJOY LIFE" FT. LETTER COLLECTIVE

We collaborated with typography artists Letter Collective for a self-promotional product - a rigid box full of special-occasion greeting cards with unconventional wishes.

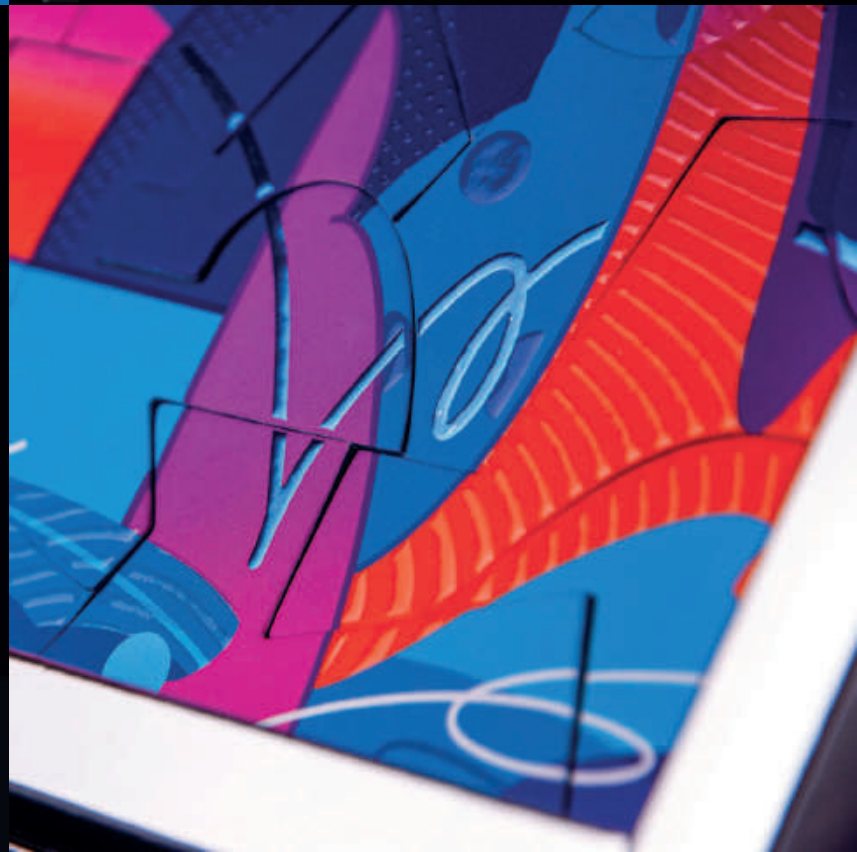

We used varied papers for each card, such as mirror paper and crush-cocoa recycled paper. We also applied various special post-print effects, such as laser cut, laser engraving, and liquid metal foils in different colours. The box has a pop-up inside and magnetic closure.

"HEAD IN THE CLOUDS" FT. G.L.O.W.

We collaborated with street artist G.L.O.W. and turned his artwork into an abstract puzzle. When assembled in its box, the puzzle becomes a piece of desk art.

We made the box out of mirrored cardboard so that it reflects the art and helps it 'burst out' of its conventional frame. We used 3D UV varnish on the mirrored box so that it looks like it's written in water and we used it on the puzzle itself to create different textures and patterns that bring connotations to summer time.

"THE KEY" FT. NASIMO

We collaborated with famous Bulgarian artist Nasimo. He turned one of his paintings into a print with added personal touches so every single print would be unique and sold at his latest exhibition.

Along with 100 specialized prints we created flyers, invitations and a set of different stickers. We added custom digital cutting to enhance the theme of the invitations and convey the feeling that the viewer holds something special. The result was an impressed audience and a happy client.
